Description of the requirements

The “Better Life Insurance” life insurance management system provides its customers a vast number of services related to life insurance through the official company system. This system has two main types of users who can access the system, the registered users, and the unregistered users. The registered users are known as members whilst the unregistered users are called as visitors. Visitors should register into the system in order to become a member. The system allows both users to view the system, browse through the basic pages and read public articles. Furthermore, the members are granted access to further features provided by the system.

Members can select and purchase a life insurance package according to their will and manage the monthly payments (premium) via the system. Firstly, they have to select a package option from the provided packages by the system. Then the system will display the payment information according to the selected package. The member then can fill in the method that they are willing to pay with the appropriate bank/card information. The system analyses the payment details in real time and alerts the user if there are any complications. If not, the system will approve the payment and generate an invoice containing the member and package details which will be sent to member's email. Then the member can make monthly payments related to the insurance package via the system through a payment portal. If there comes an instance where a member has to request for a claim from the insurance company, the member can fill the according documents via the system and request for a claim that will be sent to the company for processing. Members will also be awarded with different types of rewards that will be created by the company according to the members traits. The system will update and display about these rewards in the website.

The administrators can add, remove, and update the packages displayed in the system, view details regarding members, payments, rewards and more. They can also perform basic website functionalities such as accepting new advertisements to display on the website and remove old advertisements.

Identified classes

- Visitor
- Member
- Package
- Payment
- Invoice
- Reward
- Administrator

(Noun-verb analysis is not included according to the given instructions)

CRC Cards

Visitor	
Responsibilities	Collaborations
Browse through pages	
Read public articles	

Member	
Responsibilities	Collaborations
Enter user details	
Purchase a package	Package, Payment
Make a payment	Payment
Collect rewards	Reward

Package	
Responsibilities	Collaborations
Store package details	
Update package details	
Add packages	
Delete packages	

Payment	
Responsibilities	Collaborations
Store payment details	Member
Calculate total amount	Invoice, Package
Validate payment	

Invoice	
Responsibilities	Collaborations
Store invoice details	
Store the calculated total amount	Payment

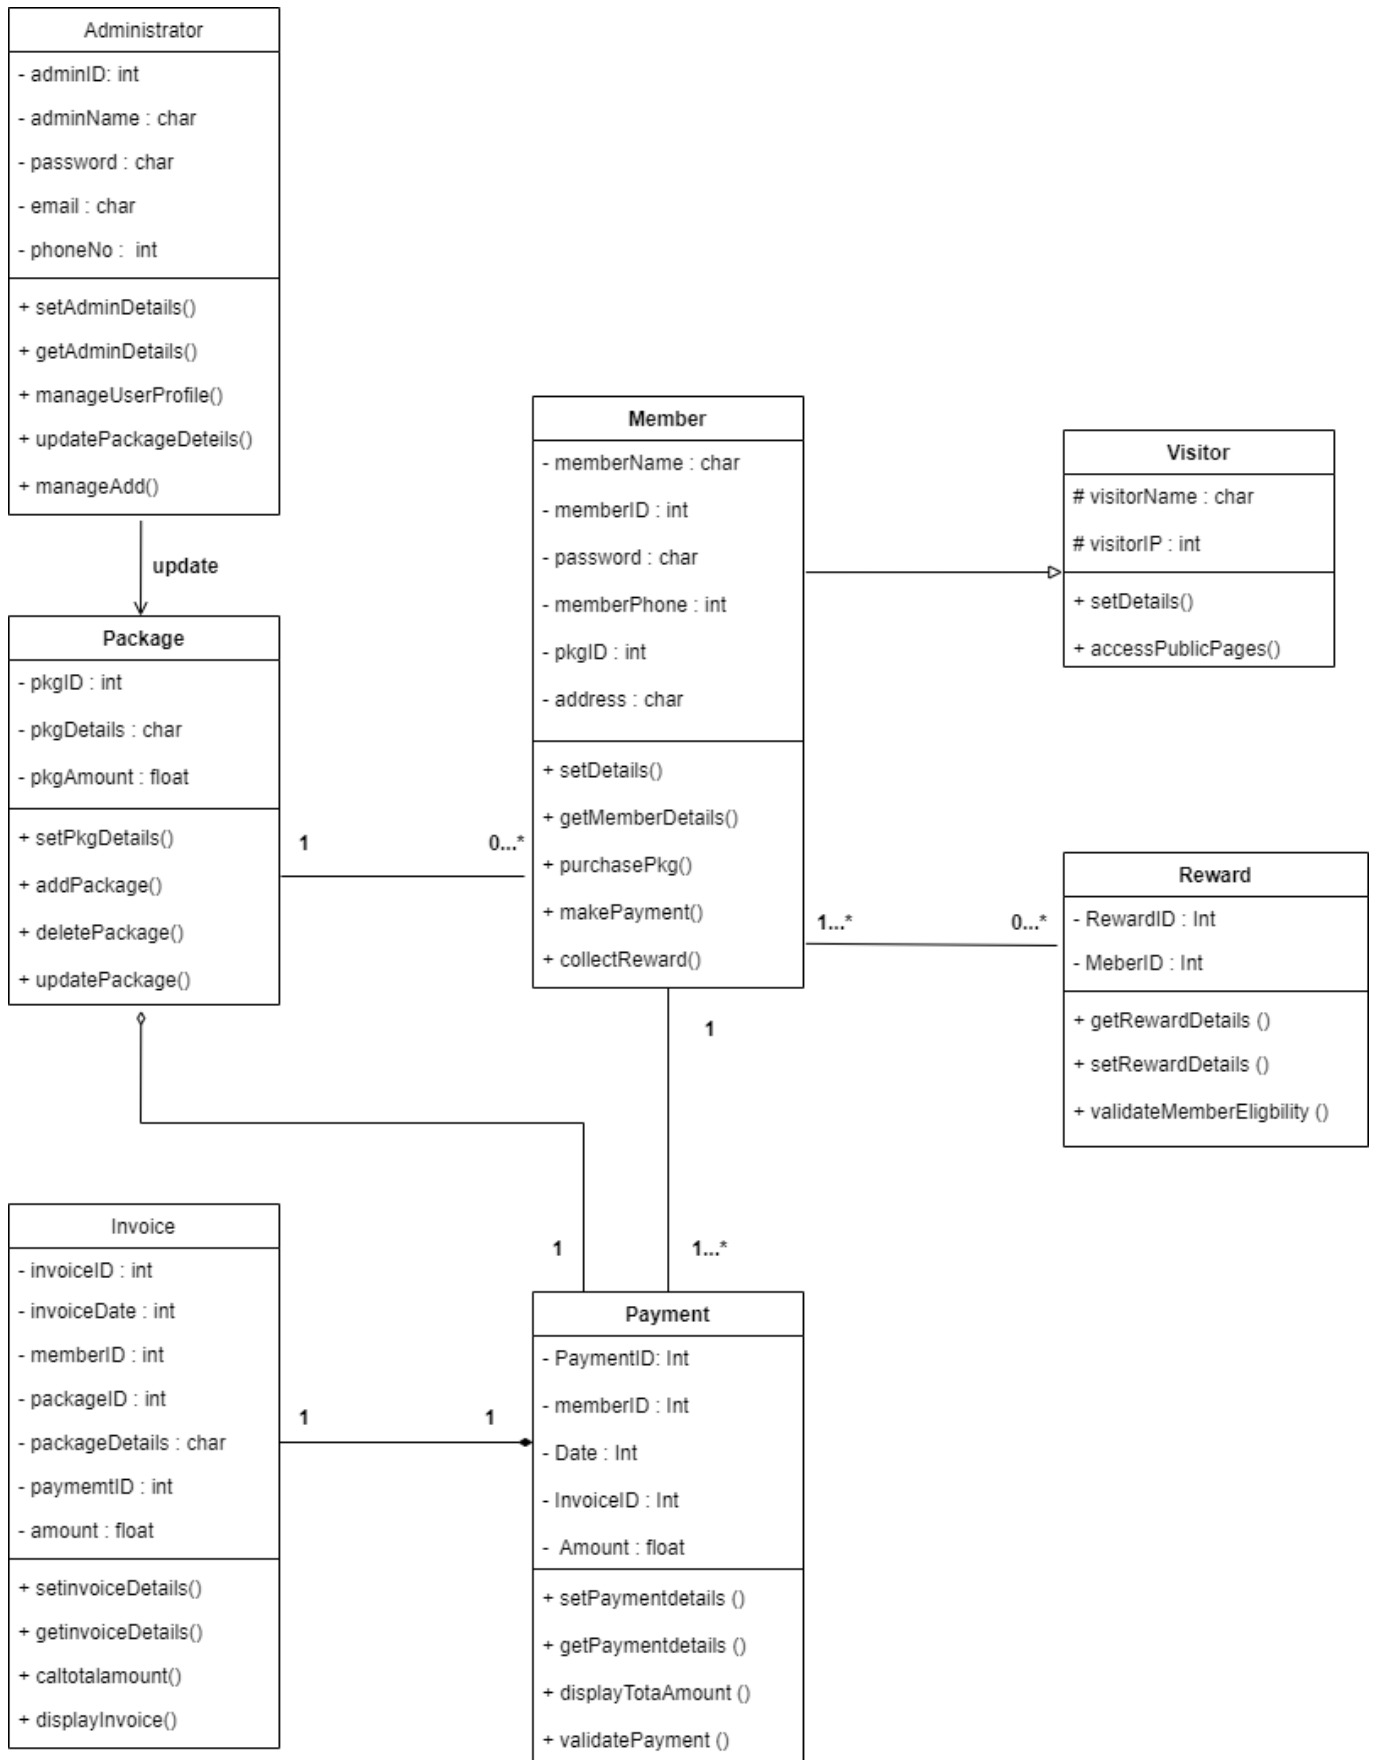

Reward	
Responsibilities	Collaborations
Store reward details	
Check member eligibility	Member

Administrator	
Responsibilities	Collaborations
Update packages	Package
Manage advertisements	

Exercise 01: Class Diagram

Individual Contribution:

Student ID	Name	Created Class
IT21380150	Chanuth Naveen Pieris	Payment
IT21189494	C.H.H.K.S.A. Chandrasekara	Visitor, Member, Package
IT21377808	M.L.Y.M. Liyanage	Administrator
IT21377044	R.S.U. Madushan	Reward
IT21199530	W.M. Chamod Maheshan Weerasinghe	Invoice

Exercise 02: Coding for classes

Individual Contribution:

Student ID	Name	Coded Class
IT21380150	Chanuth Naveen Pieris	Payment
IT21189494	C.H.H.K.S.A. Chandrasekara	Visitor, Member, Package
